## THE PATH TO ENTERPRISE-READY PLATFORMS

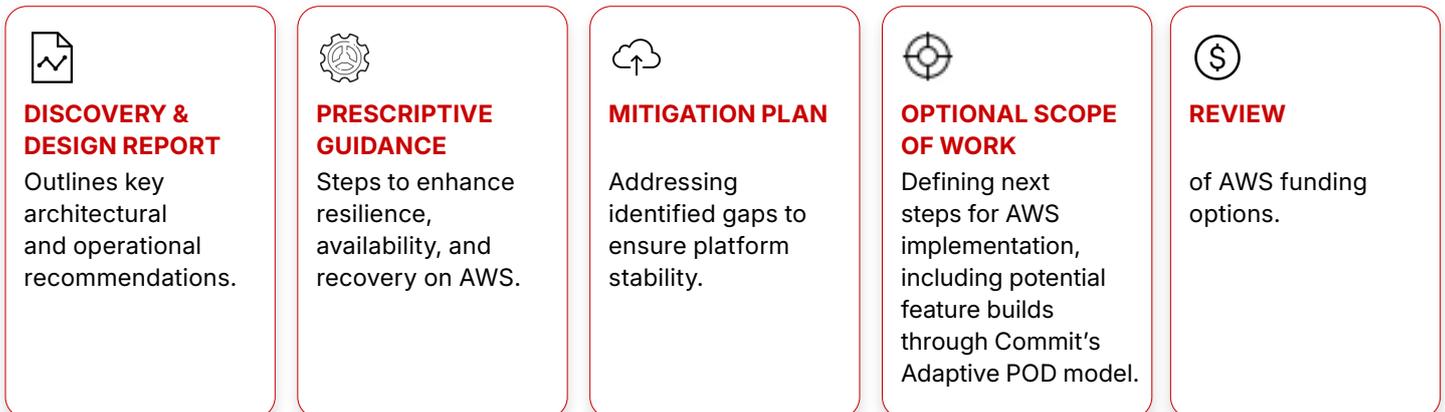

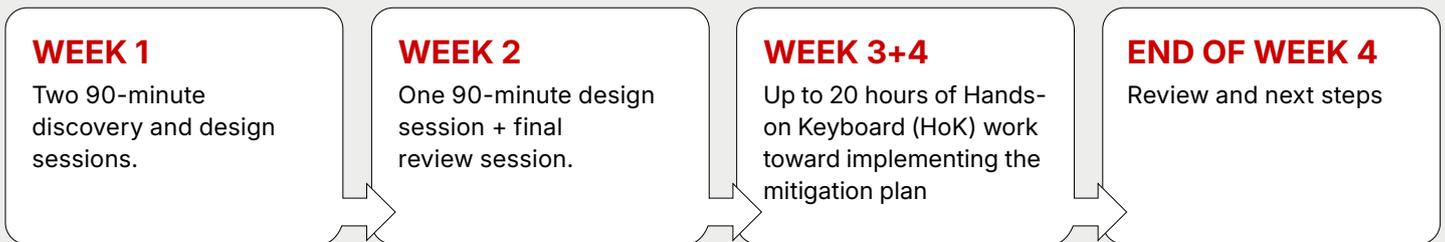

Commit’s Platform Readiness & Operations offering is designed to help AWS customers prepare their service platforms to meet enterprise, grade resilience, availability, and recovery standards. This engagement focuses on leveraging AWS services to enhance operational excellence, mitigate risks, and ensure compliance with enterprise expectations. By implementing these best practices, customers can strengthen their platform’s reliability, scale effectively, and accelerate their path to enterprise adoption.

## ENGAGEMENT ACTIVITIES

Commit’s Platform Readiness & Operations engagement includes a structured approach combining discovery, design, and implementation planning to ensure enterprise, grade operational standards on AWS.

- **Discovery & Design Sessions (2x 90 min):** Understanding customer requirements, existing environments, and operational challenges.
- **Architecture Planning Workshops:** Focused on designing resilient, scalable, and highly available architecture using AWS services.
- **Mitigation & Implementation Roadmap:** Identifying gaps in resilience, availability, and recovery, with a clear action plan for addressing them.
- **AWS Funding Review:** Exploring potential AWS funding opportunities to support implementation efforts.

## ENGAGEMENT TIMELINE

## FOLLOW-UP FUNDING OPPORTUNITIES

- As part of AWS's continued support for customer growth, eligible participants may access additional funding through the IW Build for Startups program. This includes a combination of funding to offset Commit's cost and AWS credits.
- There will be additional funding available if AWS funding program criteria is met.

These incentives apply to implementation projects across AI/ML, analytics, containers, and non-relational databases, helping accelerate your path to production and maximize the value of your AWS investment. Actual values will be determined during the assessment process.
